

TrajectoryGenerator

```
graph BT; DMPTrajectoryGenerator --> TrajectoryGenerator; PolyTrajectoryGenerator --> TrajectoryGenerator;
```

The diagram illustrates a class hierarchy. At the top is a box labeled 'TrajectoryGenerator'. Below it, two boxes are positioned side-by-side: 'DMPTrajectoryGenerator' on the left and 'PolyTrajectoryGenerator' on the right. A horizontal line connects the two bottom boxes, and a vertical line with an upward-pointing arrow extends from the center of this line to the bottom of the 'TrajectoryGenerator' box, indicating that both 'DMPTrajectoryGenerator' and 'PolyTrajectoryGenerator' inherit from 'TrajectoryGenerator'.
